

2000 kw solar system price Australia

How much do solar panels cost in Australia?

Or to put it another way - how many kilowatts (kW) of solar panels you choose to install will affect how much it costs. Prices in Australia have dropped significantly since I started SolarQuotes over a decade ago (when a piddly installation with 1 kW of solar panels cost \$10,000!) - particularly pricing for larger systems.

How much does a 10 kW solar system cost?

For a cost of a 10 kW solar system, the cost per Watt will be \$1.02. When you buy larger systems, the price per Watt comes down. Kind of like "buy in bulk and save." The reason is that the labour cost to install a larger system is about the same as installing a smaller one, so you are just really paying extra for the panels.

How much does a solar system cost?

Canstar Blue found the average solar installation cost, as of December 2023, was \$1,503. These costs were provided by survey respondents who did not buy an inclusive solar package. Again, the costs reported include a range of household sizes and solar system sizes.

How much does a solar battery cost?

According to Canstar Blue's December 2023 survey, the average cost of a solar battery is \$6,118. However, according to Solar Quotes the most popular brands and models can cost between \$8,750 and \$15,500, including installation. The overall price will depend on the brand of battery you go with, and the complexity of the installation.

What incentives are available for solar energy in Australia?

The Australian government offers various incentives to encourage people to opt for solar energy. These incentives help to reduce the cost of solar panels and installation. It includes interest-free loans to help pay for the system and great discounts on solar products, making it even more appealing to go solar.

Will solar panel costs continue to decline?

Many people in the solar industry expect solar panel costs to continue to decline, albeit at a much slower pace. Manufacturers continue to progressively release improvements in cell efficiency and panel designs which are now edging leading Solar Panels towards 1,000W of power.

The price of your new solar system will, of course, depend on how big the installation is. Or to put it another way - how many kilowatts (kW) of solar panels you choose to install will affect how much it costs.

On average the price starts from about \$4,000 for a four-kilowatt system using roughly 10 panels and goes up to around \$10,000 for a 10-kilowatt system made up of 24 panels.

In Australia, the typical price range for installing solar panel setups can vary between \$3,000 and \$12,500 or
