This is for a 15.6 kWh system which would produce 22,326 kW yearly. The panels are Canadian Solar HiDM5 400W, each with its own inverter (Enphase IQ7-60-2-US), all managed by an app. Total cost of the system is listed at \$61,620.00 minus \$16k federal tax credit, putting the net system cost at \$45,500.

This is where we SHINE, we have designed each home with the proper size solar system for the electrical panel and appliance loads. we install 500watt panels to increase efficiency and utilize smart inverters with wireless ...

I thought the way I wrote it indicated that 50% DoD would be a worst case scenario if solar was poor for 5 days straight. This would NOT be a daily target. I think the system is planned pretty well to rarely drop below 80% SoC. Belize is a 3rd world country and rules/regulations here are mostly non-existent (and off-grid is completely unregulated).

A 6kW energy system has 15 solar panels. Depending on the wattage of the solar panels you choose to go with, the actual number of solar panels for your 6kW system will vary. Most solar panels today have a wattage of about 400 watts. For example, if you install 350-watt solar panels, you'll need about 17 panels to make a 6kW system.

Based on the two major Solar PV companies in Belize, the current price for on-grid Solar PV, including installation range from BZD 4.5-7.0 per Watt. Annual maintenance costs for on-grid systems is approximately 2-5% of system cost. Projected approximate cost to supply and install a unit on-grid residential system is as
