

Does Algeria have a link between gas resources and electricity generation?

The link between gas resources and electricity generation in Algeria underscores the importance of European investments in renewable energy. A reduction in the electricity generated from natural gas would potentially increase the volume of gas exported to Europe.

Why is Algeria interested in a new gas field?

The heightened interest in Algeria comes as no surprise, considering the ongoing global energy crisis sparked by the Russian-Ukrainian war. To meet the surging demand in Europe, Algeria must augment its gas exports, necessitating increased gas production achieved through the discovery of new gas fields.

What challenges does Algeria face in achieving energy security?

Algeria's commitment to fortifying Europe's energy security amid the current crisis encounters two significant challenges. Firstly, limitations on gas and oil production are tied to technical and geological factors (Aissaoui, 2016).

Is Algeria ready for low-carbon energy?

The recent MOU signed between Sonatrach, Sonelgaz and a consortium of European partners, including VNG, Snam, Seacorridor and Verbund Green Hydrogen, underlines Algeria's commitment to tapping into the global demand for low-carbon energy.

Why is Italy partnering with Algeria in the energy sector?

The collaborative efforts between Italy and Algeria in the energy domain serve as a fundamental catalyst for their bilateral economic partnership. Before the first Ukrainian war in 2014, Russian gas presented a tangible opportunity for the Italian energy sector in terms of quantities and prices, potentially overshadowing Algerian gas.

Is Algeria a credible energy supplier?

Beyond merely being a credible supplier, Algeria's strategic focus leans more towards market security than catering solely to the needs of its customers (Witton, 2010). This distinction highlights the nuanced interpretation of energy security from the perspectives of both the supplier and the consumer.

4 · Algeria is making significant strides to attract upstream investment with its newly launched five-year licensing plan. The country has committed nearly \$50 billion to hydrocarbon projects over the next four years, with 71% of this funding ...
