Transporting fuel and oil to Antarctica is a costly and sometimes risky exercise. Before the introduction of

renewable energy systems, Australian stations required 2.1 megalitres of diesel fuel every year for power and heating. Burning this fuel emitted around 5,500 tonnes of carbon dioxide into the Antarctic environment.

Our research addresses critical issues including climate change, the human footprint in Antarctica, the conservation of Antarctic and Southern Ocean wildlife and the sustainable management of Southern Ocean fisheries in the face of increasing demands for fish and krill caused by human population growth.. Our diverse research program covers physical and life sciences in the ...
