ShineHub offers "fixed rate, free access" solar and battery plan IF YOU don't want to fork out \$15,000 for solar panels and a battery, there's a new way to get a system without paying upfront.

Electricity Bill before Solar: \$1,323 quarterly bill. Electricity Bill after Solar + Batteries: -\$35.72 quarterly bill in credit. Difference: \$1,358.72. Sandra and Louis decided to take up one of our \$0 deposit options.

Just wondering what you think of ShineHub's current offer of solar panels + battery in exchange for signing a 20 year contract to buy the surplus electricity generated - is it a good deal or not... I couldn't find many reviews outside of the ones on Shinehub's site but I may have missed them due to my search queries.

while a battery plus solar system may be a good investments, I've yet too see one that beats just getting a standalone solar system, particularly right now in SA despite our high electricity costs because you can get really good feed rates, e.g. 18c from Origin at the moment. \$16,000 is a lot of money, for around \$6000 or less you should be able to get a stand-alone ...

It considers factors such as the angle of the sun, surrounding trees, buildings, and any other obstructions that might cast shadows on your solar panels. All-year-round performance insights: By using this technology, ShineHub can provide you with a comprehensive performance forecast for your solar panels. We can predict how they will perform in ...

ShineHub is a leading installer of solar battery solutions in SA (including the #1 battery installer in the SA government Home Battery Scheme (HBS) between 2018-2023) and has a history of running successful solar bulk buy programs for SA councils.

ShineHub was selected as the City of Charles Sturt exclusive Solar Bulk Buy program provider through a comprehensive and in-depth evaluation and selection process. No stone was left unturned with due diligence carried out on behalf of our residents to provide reassurance and confidence that their solar project will be in the best of hands.

Higher Upfront Cost: With fewer STCs to offset installation costs, a typical solar system might cost an additional 5-10% after the new year. Longer Payback Period: Although solar is still a smart investment, the reduced rebate in 2025 will slightly extend the time it takes to recoup your investment through energy savings.

In the ever-evolving world of solar energy, home battery storage is becoming increasingly important as households seek greater energy independence. ... This is critical for us, as the VPP is a cornerstone of ShineHub's success, and we would never risk introducing inferior products into our ecosystem, or products that fail to meet the needs ...

Solar: The Way Forward. As we navigate these challenges, solar energy, especially solutions that include a solar battery and Virtual Power Plant offering, presents itself as a solution to help people navigate this "petulant little boy". Not only does it help alleviate the strain on the grid, but it also offers households a way to combat power costs that could keep increasing.
