Why is bamboo scaffolding popular in Hong Kong?

"Bamboo scaffolding is highly preferred in Hong Kong for several reasons. Firstly, it offers significant advantages over steel scaffolding. Bamboo is lighter, more flexible, and readily available in the region, making it a cost-effective option. Moreover, bamboo is an environmentally friendly choice compared to metal scaffolding.

Where is bamboo used in Hong Kong?

The majority of bamboo used in Hong Kong's is sourced from Macau, which in turn is imported from the Guangxi autonomous region in Southern China, where bamboo is predominantly grown. In the realm of scaffolding, two types of bamboo are commonly employed: Kao Jue (pole bamboo) and Mao Jue (hair bamboo).

Are bamboo webs still used in Hong Kong?

Most cities in the region have phased it out to favour materials such as steel and aluminium. In Hong Kong, intricate bamboo webs are still part of the cityscape, latticed around both old residential flats and glitzy skyscrapers.

How does bamboo grow in Hong Kong?

The bamboo is usually transported to Hong Kong via Macau. Bamboo is one of the fastest-growing plants in the world, and in some cases can grow 60cm a day, and eventually 40 metres tall. Bamboo has thick underground roots called rhizomes, which can grow quickly, creating new shoots metres away.

Can a bamboo pole be cut in Hong Kong?

In Hong Kong it is common to see "bamboo balconies" jutting from the sides of buildings where renovations are being carried out on individual units, many floors up. A bamboo pole can also be cut to fit an awkward space, which is ideal for Hong Kong, where construction spaces can be tight amid the densely packed maze of buildings.

Is dumping bamboo poles illegal in Hong Kong?

While the initiative is meant to be fun, there is a serious side. Last month contractors were fined HK\$20,000 for illegally dumping bamboo poles and other waste on a city road.
