

What is energy in Belarus?

Energy in Belarus describes energy and electricity production, consumption and import in Belarus. Belarus is a net energy importer. According to IEA, the energy import vastly exceeded the energy production in 2015, describing Belarus as one of the world's least energy sufficient countries in the world. Belarus is very dependent on Russia.

Is Belarus a net energy importer?

Belarus is a net energy importer. According to IEA, the energy import vastly exceeded the energy production in 2015, describing Belarus as one of the world's least energy sufficient countries in the world. Belarus is very dependent on Russia.

Is Belarus dependent on Russia?

Belarus is very dependent on Russia. Total energy consumption (measured by total primary energy supply) in Belarus was 27.0 Mtoe in 2018, similar to consumption in Norway and Hungary. Primary energy use in Belarus was 327 TWh or 34 TWh per million persons in 2008.

Is biomass a source of electricity in Belarus?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Belarus: How much of the country's electricity comes from nuclear power?

What are Belarus' strategic goals for 2035?

With energy independence and import supply diversification as strategic goals up to 2035, Belarus plans to reduce Russian supplies from 90% to 70% of total energy imports and, most strikingly, to reduce the share of gas in electricity and heat energy production from 90% to 50%.

Who regulates electricity in Belarus?

Belarus does not have a single independent energy regulatory authority. The Ministry of Antimonopoly Regulation and Trade is responsible for regulating electricity and heat tariffs for industrial customers, independent suppliers and all categories other than residential consumers, based on the 2011 Decree on Price Tariffs.
