

What is a building management system (BMS)?

The BMS will monitor and control all aspects of a building including ventilation, fire, energy, and security systems. The data gathered from around a building or facility is brought back to a central interface from a range of proprietary equipment and systems, enabling a single point from which all building activity can be controlled.

What is Modern BMS technology?

Modern BMS technology truly is a marvel. Contemporary systems can perform nearly any function you need it to do. You need a company that listens to exactly what that is, and then builds a system to meet those needs, whether it be minimal functionality or the full bells-and-whistles.

Where are ALC BMS systems installed?

Based in Wellington and Auckland, our Engineers and Technicians provide and service ALC BMS systems throughout the country and the Pacific Islands. Our systems have been installed into Hospitals, Office Buildings, Government Buildings, Schools, Laboratories, Data Centres, Libraries, Courts, Stadiums, Hotels, Resorts and more.
