How it works? Solar panels contain photovoltaic cells made of silicon that convert incoming sunlight into electricity instead of heat. When photons, or light arrays, hit the thin layer of silicon on top of the solar panel, they knock electrons off the silicon atoms and create an electric current (DC) in the solar cells on top of the panels.

Solar energy systems that can be installed in residential, commercial, or industrial buildings can operate grid-connected or off-grid. In grid-connected solar energy systems, excess energy can ...

Bnk energy Estonia
