

What is Bolivia's energy mix?

Bolivia's overall energy mix is dominated by fossil fuels, with natural gas (50%) and petroleum products (31%) supplying most of the country's energy in 2020. In 2021, Bolivia's national electricity agency ENDE announced its intention to generate up to 80% of the country's power from renewable sources by 2025.

How can Bolivia improve energy production?

Bolivia continues to make efforts to upgrade the infrastructure needed for renewable energy production. The National Interconnected System (SIN), which the government has put in place, aims to improve the nation's capacity for producing electricity by building additional power plants, transmission lines and substations.

What is the primary source of energy for Bolivia?

The primary source of energy for Bolivia from this study is solar PV. Such high shares of solar PV in Bolivia are supported by solar resource findings in Breyer and Schmid (2010), which determined Bolivia to be among the ten countries with the maximum solar irradiation for fixed optimally tilted PV systems.

Should Bolivia use solar energy to generate synthetic fuels?

Using Bolivia's own excellent solar resources to generate synthetic fuels in BPS-1 and BPS-2 would result in energy independence and security. Due to the lack of GHG emission costs in BPS-3 fuel costs remain for the fossil fuels used in the heat and transport sectors. Fig. 23.

What is the energy sector in Bolivia?

The Bolivian energy sector, which is almost completely nationalized, is headed by the MHE (Ministerio de Hidrocarburos del Estado Plurinacional de Bolivia) whose mission, according to their website, is to create policies that promote the integrated development of the energy sector in a manner that is equitable and in harmony with Mother Earth.

How much solar power does Bolivia have?

In the study of Jacobson et al. (2017), Bolivia's all-purpose end load would be covered by 22% wind energy, 15% geothermal, 3% hydropower, 49% solar PV, and 10% CSP. For the whole of South America, Löffler et al. (2017), find roughly 40% shares of both hydropower and solar PV, with the remaining 10% covered by wind offshore and onshore.
