

Does Brunei use natural gas?

The majority of natural gas is exported. Nevertheless, the domestic natural gas utilisation still dominates the primary energy supply (80%). Oil covers the remaining 20% of primary energy supply. Brunei's total energy supply is declining in proportion due to low oil price in 2016 which makes Brunei hold their oil production.

Does Brunei have a solar power plant?

Brunei has already implemented a solar demonstration power plant with the capacity of 1.2 MW. It is planned to expand this plant in the future. Moreover, in the long-term Brunei aims to develop offshore wind projects with the total capacity of between 18 and 20 MW.

How can Brunei reduce energy consumption?

Brunei has implemented the National Appliance Standards and Labelling Regulation, which aims at reducing domestic energy consumption in order to enable higher exports of gas. The Energy Efficiency and Conservation Program envisages the reduction of energy use by 45% by 2035 based in 2005 level.

What is the primary energy supply of Brunei?

The primary energy supply of Brunei comes exclusively from fossil fuels (Figure 1) with total of 3,420 ktoe. The majority of natural gas is exported. Nevertheless, the domestic natural gas utilisation still dominates the primary energy supply (80%). Oil covers the remaining 20% of primary energy supply.

Can Brunei change from natural gas to hydrogen?

"The country can also opt to change from natural gas production to hydrogen," he said. The Japanese energy expert also said Brunei has the potential to benefit from its association with Japan, Australia, and other countries by fostering collaboration for the transfer and assistance of green technology.

Does Brunei Darussalam have a minimum energy performance standard?

This standard would require manufacturers, suppliers, wholesalers, and retailers in Brunei Darussalam to import and sell electrical appliances that meet consumers' Minimum Energy Performance Standards.

Brunei: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.
