

Buildings such as residential, education, office, healthcare, and industrial are emerging as critical consumers in energy consumption. Energy consumption for buildings represents 30-45% of global energy use [[1], [2], [3]], with a larger part of the energy used by the building subsystems, which consist of cooling and heating systems; safety, water, lighting, and ...

Sustainable buildings have become a key issue for many developing and developed countries in the twenty-first century. The global population is expected to rise from 7.7 billion in 2019 to 9.7 billion in 2050 and will reach more than 10.9 billion by the end of this century [1]. This increase in the global inhabitants will correspondingly increase the demand for water, ...
