

Seasonally adjusted solar panel tilt angles for Ouagadougou, Burkina Faso. If you can adjust the tilt angle of your solar PV panels, please refer to the seasonal tilt angles below for optimal solar energy production in Ouagadougou, Burkina Faso.

The construction of the solar power plant is anticipated to substantially boost the electricity supply for the Burkinabè populace and position Burkina Faso as a key player in the realm of sustainable development.

The capacity of Burkina Faso's electricity grid has increased by 68 MW, following the commissioning of two solar photovoltaic power plants in Pâ, in the Boucle du Mouhoun region, and Kodéni, in the Bobo-Dioulasso region (famous for its film productions).

The Yeleen Solar Plants Development and National Power System Reinforcement Project is an investment operation aiming to deploy solar power plants and reinforce power grid. It is part of the "Desert to Energy" Initiative in Burkina Faso.

Research shows that 47% of the population of Burkina Faso would optimally be served by clean hybrid mini-grids and stand-alone solar systems. Off-grid solutions therefore have a large potential in the country.

Representing the Prime Minister, Minister of State Kassoum COULIBALY emphasized Zano's role in strengthening national production and increasing the share of solar energy in Burkina Faso's energy mix.

Specifically for Burkina Faso, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates and cross-correlation with the relevant socio-economic indicators.

In a significant step towards bolstering its renewable energy capacity, Burkina Faso marked the commissioning of the Pâ photovoltaic solar power plant.
