

Who is cold electric?

We are Cold Electric, a smart battery company. We reduce energy waste to almost zero, creating dynamic opportunities in a clean-energy future. Our batteries create decentralised, self-sufficient living. The days when millions of people's electricity needs were met by a handful of large coal, nuclear and gas-fired power stations are waning.

Will cold winters affect electricity prices in Denmark?

In the coming years, cold winters or reductions in natural gas supplies could mean new periods of increasing gas and electricity prices. In the longer term, Denmark risks greater electricity price fluctuations as the share of solar and wind energy in the total electricity mix grows, making electricity supply less adjustable and stable.

Why is the electricity price in Denmark affected by primary energy sources?

As primary energy sources are traded across borders in Europe, and because it is possible to substitute between energy inputs in electricity production, the electricity price in Denmark is affected by the price of primary energy sources in Europe.

Does Denmark produce a lot of electricity?

The country's dedication to wind power, coupled with the expansion of other renewable energies, significantly reduced the carbon intensity of its electricity production to 92 grams of CO₂ per kilowatt-hour (g CO₂/kWh). In 2022, Denmark generated 34 TWh of electricity.

What does Cold Electric do?

Cold Electric is committed to collaborating with customers and partners to drive innovation and development in energy technology. We look forward to working together with various stakeholders to achieve the goal of sustainable energy and contribute to creating a better living environment for the future.

Is Denmark a net importer of electricity?

Denmark is a net importer of electricity. The flow of electricity between Denmark and the countries it has interconnectors with (Norway, Sweden, Germany and the Netherlands), and the direction of that flow, is highly variable and depends on current demand and current Danish wind power output.

Denmark's western electrical grid is part of the Synchronous grid of Continental Europe whereas the eastern part is connected to the Synchronous grid of Northern Europe via Sweden. In ...

A new partnership aims to ensure that Denmark is able to power its electric vehicles (EVs) with 100% renewable electricity 24/7 and to leverage EVs and battery storage ...

The broader plan is to have up to 1 million electric and hybrid cars on the road in Denmark by the same year. That is expected to reduce greenhouse gas emissions by more than 2 million tons.

In the coming years, cold winters or reductions in natural gas supplies could mean new periods of increasing gas and electricity prices. In the longer term, Denmark risks greater electricity price fluctuations as the share of solar and wind energy in the total electricity mix grows, making electricity supply less adjustable and stable.

We are Cold Electric, a smart battery company. We reduce energy waste to almost zero, creating dynamic opportunities in a clean-energy future. Our batteries create decentralised, self sufficient living.

A new partnership aims to ensure that Denmark is able to power its electric vehicles (EVs) with 100% renewable electricity 24/7 and to leverage EVs and battery storage to expand renewables" use for grid stability. In 2020, the Danish government announced a plan to have 775,000 EVs or hybrid vehicles on its roads by 2030.
