Storage solutions Product highlights Repurposing and upgrading conventional power systems is a smart way to bring down ...

Roughly 73% of global emissions that cause climate change come from the use of energy, mainly through burning of fossil fuels for power, heat, cooling, transportation and industrial processes. This means that the global transition to renewable energy is one of the most important ways of fighting climate change.

Denmark's Climate Status and Outlook 2023 (CSO23) is a technical assessment of how Denmark's greenhouse gas emissions, as well as Denmark's energy consumption and production will evolve over the period up to 2035 based on the assumption of a frozen-policy scenario ("with existing measures").

Denmark has committed to one of the most ambitious climate goals in the world of reducing annual greenhouse gas emissions by 70 percent in 2030 compared to the emissions in 1990.
