

Dominican Republic kore power

What was the Dominican power sector like before the 1990s?

Prior to the 1990s reform, the Dominican power sector was in the hands of the state-owned, vertically-integrated Corporaci#243;n Dominicana de Electricidad (CDE). The operation of the company was characterized by large energy losses, poor bill collection and deficient operation and maintenance.

How many private companies are generating power in the Dominican Republic?

The electricity sector has seen significant entry of private companies, particularly in the generation sector; as of 2012, there were 13 private companies generating power in the Dominican Republic.

How many CDM projects are there in the Dominican Republic?

Currently (December 2007), there is just one registered CDM project in the electricity sector in the Dominican Republic, the El Guanillo wind farm, with estimated emission reductions of 123,916 tCO₂e per year. The World Bank is currently financing a Power Sector Technical Assistance Project.

What type of energy does the Dominican Republic use?

This page is part of Global Energy Monitor's Latin America Energy Portal. Fossil fuels - including oil, natural gas, and coal - supply most of the Dominican Republic's energy, supplemented by smaller amounts of renewables, including hydro, wind, solar and biofuels.

Why is the electricity sector in the Dominican Republic in crisis?

As previously described, the precarious situation of the electricity sector in the Dominican Republic is not caused primarily by limited generation capacity. Although a reduction of losses may provide a more economic way of resolving the crisis, there are plans for significant new investments in new generation capacity, especially in hydropower.

How can the Dominican Republic integrate solar and wind resources?

The short-term variability and geographic diversity of the wind resource will need to be studied before implementation of projects. The Dominican Republic has created a framework for integrating solar and wind resources in its grid that can drive renewable energy adoption for years to come.

However, the Dominican Republic has set out to tackle these challenges by scaling up its renewable energy resources, which can help meet energy demand while delivering significant socio-economic benefits. It aims to use 25% more renewable power by 2025. Accelerated deployment of renewables in the Dominican Republic would cut energy costs for
