

Who manages Lithuania's electricity storage facilities?

At the end of July 2021, the Government of the Republic of Lithuania appointed Energy cells, a company of the EPSO-G Group, as the operator of the instantaneous isolated operation electricity reserve for Lithuania's electricity storage facilities and entrusted it with the management of the electricity storage facilities system.

Will Lithuania switch from fossil fuels to electricity?

Lithuania would switch from fossil fuels to electricity from renewable energy sources (RES), generate electricity for domestic needs, to produce hydrogen, and export not only energy, but also higher-value sustainable products.

Why is electricity storage important in Lithuania?

Lithuania's system of electricity storage facilities is essential to ensure the security of Lithuania's energy system and its ability to operate in isolated mode.

How will Lithuania's energy storage system work?

The energy storage system, which will provide Lithuania with an instantaneous isolated operation electricity reserve until synchronisation with the continental European networks (CEN), will be used after synchronisation for the integration of energy produced from renewable sources.

What will happen if electricity generation peaks in Lithuania?

Peaks in electricity generation will lead to the power-to-gas production of cheap green hydrogen and synthetic fuels. By 2030, 1.3 GW of hydrogen production capacity from electricity generation facilities is planned to be built in Lithuania, and by 2050 the total hydrogen production capacity will reach 8.5 GW.

Key characteristics of the energy system in Lithuania The National Energy Independence Strategy (NEIS) is designed to bring about fundamental changes in the energy sector. One of the main ones is the replacement of fossil fuels with climate-neutral energy sources, which will change the whole energy chain from production to transmission and ...
