

Ecuador battery towers

How much power does Ecuador need a year?

Electricity demand grows by 200 MW every year, meaning Ecuador should add 250 MW or 300 MW of new power generation each year. However, Ecuador has added minimal additional generation in the last three years.

What is Ecuador's Energy Outlook?

Ecuador's energy outlook has undergone a drastic change in recent times. The country is fast moving from conventional sources of energy to more clean, renewable-based energy. There is a shift from a heavy reliance on fossil fuels to nearly complete self-sufficiency through renewable energies, particularly hydroelectric power.

Why is the Ecuadorian electricity sector considered strategic?

The Ecuadorian electricity sector is considered strategic due to its direct influence with the development productive of the country. In Ecuador for the year 2020, the generation capacity registered in the national territory was 8712.29 MW of NP (nominal power) and 8095.25 MW of PE (Effective power). The generation sources are presented in Table 1.

Does Ecuador have an electricity market?

In this research, an analysis of the electricity market in Ecuador is carried out, a portfolio of projects by source is presented, which are structured in maps with a view to an energy transition according to the official data provided.

What is Ecuador's largest hydropower plant?

CCS is the country's largest hydropower plant by generation capacity. Ecuador's state-owned electricity company CELEC imports electricity from neighboring Colombia, costing \$400 million in 2022. It is also increasing diesel purchases from Petroecuador to power its thermal electric power plants.

How much energy does Ecuador produce in 2022?

In 2022, Ecuador's generation capacity was 8,864 MW, of which 5,425 MW (61 percent) corresponded to renewable energy and 3,438 MW (39 percent) to non-renewable energy sources (fossil fuels derived from oil and natural gas).
