Does Greenland have a decentralised energy system?

No comprehensive study on Greenland has been found, as existing studies focus on small individual communities. Such studies provide a tailored perspective on decentralised energy systems, considering local climate conditions, energy demand, and quality of local renewable resources.

Does Greenland supply E-fuel?

This study assumes that Greenland only partially supplies e-fueland e-chemical demand of importers. All scenarios include Greenland's domestic energy demand. The list of scenarios is as follows: "Steady Europe": In 2030,1.65% of European demand for liquid hydrocarbons is included,in addition to 5% of European demand for e-ammonia and e-methanol.

Is Greenland a good place for offshore wind power?

However,a study on wind and wave power potential on 22 islands has found Greenland to be one of the best sites for offshore wind powerwith 4555-5450 full load hours (FLH) in addition to good conditions for wave power with 1050-4000 FLH . Satymov et al. found 5000-6000 FLH in the south of Greenland for an improved wave energy converter.

What is Greenland's domestic energy demand?

All scenarios include Greenland's domestic energy demand. The list of scenarios is as follows: "Steady Europe": In 2030, 1.65% of European demand for liquid hydrocarbons is included, in addition to 5% of European demand for e-ammonia and e-methanol. In 2050, 10% of the demand for e-FTL, e-ammonia, and e-methanol is supplied.

Is Greenland a potential E-Fuels hub?

Greenland's transition from a fossil fuels-based system to a 100% renewable energy system between 2019 and 2050 and its position as a potential e-fuels and e-chemicals production hubfor Europe,Japan,and South Korea,has been investigated in this study using the EnergyPLAN model.
