

What percentage of Estonia's energy supply is renewable?

According to the International Renewable Energy Agency (IRENA), in 2020, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of this renewable energy mix was heavily dominated by bioenergy, which represented 93% of renewables.

What kind of energy does Estonia support?

Estonia supports PV, wind, biogas/biomass for electricity production and heat pumps and biomass energy for heating. When it comes to transport, Estonia supports the electrification of public transport (buses) and the use of biofuels. Support schemes: 1 MW.

Are there island specific energy support systems for West Estonian islands?

In Estonia there are no island specific support systems for renewable energy or energy efficiency, nor are there island specific permitting procedures. However, national marine spatial planning is in progress with ongoing discussions on how to improve West Estonian islands energy supply.

Are there specific regulations relating to energy sharing in Estonia?

However, specific regulations related to energy sharing, energy communities or prosumers have not been adopted yet. In Estonia there are no island specific support systems for renewable energy or energy efficiency, nor are there island specific permitting procedures.

Why did Estonia stop relying on Russian energy sources in 2022?

In response to geopolitical tensions, Estonia reduced its reliance on Russian energy sources by halting imports of Russian pipeline gas in April 2022 and banning all Russian natural gas and oil product imports, including LNG, by September 2022.

What is the largest power plant in Estonia?

The largest power complex in the country, Narva Power Plants, consists of the world's two largest oil shale-fired thermal power plants. The complex used to generate about 95% of total power production in Estonia in 2007. Falling to 86% in 2016 and 73% in 2018.

Fermi Energia was founded by Estonian energy and nuclear energy professionals to develop deployment of SMRs in Estonia. In July 2019, the company launched a feasibility study on the suitability of SMRs for Estonia's electricity supply and climate goals beyond 2030, following a financing round from investors and shareholders. ...

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of ...
