

Is Fulcrum BioEnergy going under?

(Bloomberg) -- Fulcrum BioEnergy, a clean-fuels pioneer that raised more than \$1 billion to turn household waste into lower-emitting fuels for planes and trucks, is in danger of going under. The company recently laid off nearly all of its staff of about 100 and halted most of its operations, according to more than a half-dozen former employees.

Is Fulcrum the future of transportation fuels?

Since the company launched in 2007, Pleasanton, California-based Fulcrum has been heralded as a key player in the broader quest to develop new sources of cleaner transportation fuels. One of the key roadblocks is finding inexpensive feedstocks that can generate vast quantities of fuel with fewer heat-trapping emissions.

Does fulcrum have a future?

Nuveen, a primary financial backer of the company, declined to comment. The dire turn of events raises questions about the future of Fulcrum's flagship plant in Nevada, located 20 miles outside of Reno, which cost more than \$200 million to build and has been plagued by costly technical problems since it began operations in 2022.

Is Fulcrum going out of business?

Fulcrum then hit the brakes on plans to sell \$500 million of tax-exempt bonds through the Indiana Finance Authority to build a larger trash-to-fuels facility in Gary. The company hasn't filed for bankruptcy as of the end of last week, and it's unclear if there's any remaining possibility that additional financing could be raised.

Does fulcrum have a role in sustainable aviation fuel?

Fulcrum's struggles cast a shadow over the waste gasification sector, particularly in its role in producing sustainable aviation fuel (SAF). The airline industry's commitment to using 10% SAF by 2030 now appears more challenging, as the shortfall in SAF supply grows more pronounced.

How much fuel does Fulcrum produce a year?

Fulcrum's Nevada plant, which was supposed to produce 11 million gallons of fuel annually, represents a significant gap in the projected supply chain. As a comparison, that would represent around 30% of the UK's SAF mandate for 2025 assuming aviation fuel consumption remained constant between 2021 and 2025.

In a blow to the idea of turning municipal waste into fuels and chemicals, the start-up Fulcrum BioEnergy laid off most of its staff and shut down its flagship plant near Reno, Nevada, in mid-May. A former manufacturing ...

Fulcrum BioEnergy shut down its flagship waste-to-fuel plant in May. Alex Howard looks at the implications for the waste gasification industry, and how other first-of-a-kind developers can reassure investors moving

Fulcrum energy Haiti

Fulcrum BioEnergy filed for Chapter 11 bankruptcy in a Delaware court on Monday. The company's officers are seeking protections for the parent company and Fulcrum Sierra Biofuels, which ran its Nevada waste refining plant before it shut down earlier this year.

A US company that had set ambitious plans to convert garbage into sustainable aviation fuel (SAF) and attracted investments from major airlines and energy companies filed for Chapter 11 bankruptcy protection this week.

Fulcrum was the first company to take shredded landfill waste, gasify it and then convert it into a liquid fuel. While technically challenging, garbage-to-fuels has long been tantalizing. That's because household waste is abundant and cheap, and it doesn't require additional acres for growing energy crops.
