

What is the greenpack system?

An intelligent automatic battery changer, energy-charged GreenPacks and a wide range of possible applications - that's the GreenPack system. The uncompromising safekeeping for your batteries, both for storage and transport. Want your own batteries, penlights or headlamps in your own label? Make our standard products for end customers your own.

What is the greenpack exchangeable battery?

The GreenPack exchangeable battery was taken over for further development by the mobile energy experts of Ansmann AG in August 2020. Generation one of the one-grip interchangeable energy storage device for green power currently offers 48 V nominal voltage, 1400 Wh capacity and a high max. continuous current load of 25 A.

How many batteries does a greenpack boat have?

The three GreenPack lithium-ion batteries at the bow provided the engine with sufficient energy for the 30-km-long route. The GreenPack batteries attracted a lot of interest from spectators and boat owners. Due to the modular approach, the GreenPack rechargeable battery is an ideal partner for electric mobility on the water or on land.

What is Ansmann's 'greenpack'?

This is why the German battery experts of Ansmann AG and Borealis, one of the world's leading providers of advanced and circular polyolefin solutions, are cooperating in the development and production of the second generation of Ansmann's exchangeable battery system called "GreenPack".

What is the greenpack used for?

The GreenPack is used in e-fleets of sharing and delivery services as well as in commercial transport. It can be found in lawn mowers, snow blowers and weed trimmers used in gardening and landscaping. In associated exchange/charging stations, empty GreenPack battery modules can be swapped for full ones quickly and on demand.

The GreenPack Speeder is a high-performance unisex model S-pedelec, which is currently under development at our company. Due to the stable box frame, it is ideally suited for rental and as a sporty two-wheeler with a broad range. Driven by a strong brand-name engine and equipped with a GreenPack battery, it is supposed to transport the user over 200 km in distance. The ...

Solar energy is a strongly volatile energy source. To maximise the solar-energy gain and use it appropriately, decentralised storage systems are necessary. GreenPack rechargeable batteries can be ideally used as solar-energy ...

The GreenPack's idea involved charging one battery while using another and then exchanging them when the battery in use ran down. To realize the concept the company needed robust materials that could, first, safely house the lithium-ion cells in a material that minimized the fire risk and, second, withstand the significant wear and tear that would result as users repeatedly ...
