

What is the Baghdad Battery?

The Baghdad Battery is the name given to a set of three artifacts which were found together: a ceramic pot, a tube of copper, and a rod of iron.

Who discovered the 'Baghdad Battery'?

The popular belief concerning the so-called "Baghdad battery" In around 1938 or thereabouts, the Austrian painter Wilhelm König, who was serving as an assistant to the leader of the Baghdad Antiquity Administration, discovered the object that has now become known as the "Baghdad battery" in the storage room of the Iraq Museum in Baghdad.

Where can I find the original 12 Baghdad Batteries?

Some of the original 12 Baghdad Batteries can be seen at the National Museum of Iraq, which is currently closed due to the 2003 looting which saw nearly half its collection stolen. Discover Baghdad Battery in the National Museum of Iraq in Baghdad, Iraq: A 2200 year old vessel may have been able to keep a charge.

Did the Baghdad Batteries produce electricity?

Even though there are very few documented experiments with the Baghdad Batteries, in 1978, Dr. Arne Eggebrecht from the Peabody Museum in Hildesheim conducted a few experiments with Baghdad Battery models (replica) using grape juice as an acidic liquid and thin layers of silver, which supposedly resulted in the production of electricity.

Are Baghdad Batteries still a mystery?

The Baghdad Batteries remain a mystery for now. However, after conducting a series of tests, Dr. Marjorie Seneschal, a professor of history and science of technology at Smith College, USA, concluded:

Did the Baghdad Batteries have wires or conductors?

No wires or any conductors have been found or associated with the Baghdad Batteries. Several other artifacts resemble the Baghdad Batteries found throughout ancient Mesopotamia, mainly used to store papyrus. Research suggests that rotted papyrus scrolls placed inside these vessels might have caused acidic organic residue.
