Currently, renewables in Cape Verde reach 24% of the energy produced: 20% wind and 4% solar. However, the perspective is the solar energy to have more weight in the future. By 2025, renewables are expected to reach 30% of the energy produced in Cape Verde and 50% by 2030.

Thin Film. This type of panel is made up of very thin structures that can be set up on roof tiles, glass, and masonry. Their thinness makes them light and the fact that they are made of amorphous silicon, cadmium telluride, and/or gallium gives them flexibility, also. This option is, most of the time, chosen for aesthetic purposes and large-scale projects, due to its ...

The battery can store the extra energy produced from solar panels during the day to avoid using electricity at a more expensive rate. The peak time-of-use (TOU) rates can be double the price compared to off-peak rates. In such a scenario, a solar battery storage system can come in handy for using electricity without having to pay such a high price.
