

A Intersolar, la fiera internazionale per le energie rinnovabili, HORIEN Salt Battery Solutions ha presentato le sue batterie al sale. Forte di un'esperienza decennale maturata in molteplici settori e di oltre 1 GWh di prodotti installati, l'obiettivo è raddoppiare i ...

HORIEN Salt Battery Solutions, former FZSoNick, is the world's first player to offer a safe & fully sustainable energy storage & backup solutions. From raw material sourcing and zero environmental ...

Traditional batteries, loaded with negative and positive electrodes, could become a thing of the past thanks to the emergence of new salt batteries that do not explode. ...

The facilities cover the entire production of sodium metal chloride cells and complete batteries: Shaping and sintering of the solid electrolyte, production and of the cathode materials, cell ...

This "what if" moment shines a light on a lesser-known but compelling technology: the salt battery. While largely overshadowed by lithium-ion batteries in electric mobility, salt batteries bring unique benefits that make them a game-changer for stationary power storage and applications where safety and durability are paramount.

This "what if" moment shines a light on a lesser-known but compelling technology: the salt battery. While largely overshadowed by lithium-ion batteries in electric ...

Traditional batteries, loaded with negative and positive electrodes, could become a thing of the past thanks to the emergence of new salt batteries that do not explode. These batteries are not only characterized by being composed of salt but also by being submerged in solid electrolyte, a material "conducting ceramic ions based on aluminum ...

Enabling Transition | HORIEN Salt Battery Solutions, former FZSoNick, is the world's first player to offer a safe & fully sustainable energy storage & backup solution: from raw material...

Originally developed for electric cars, nowadays they supply mobile phone antennas with electricity, and tomorrow perhaps entire districts: The salt battery is a safe and long-lasting battery technology with huge potential.

The battery that should have been installed in the A-Class was a so-called salt battery. In contrast to most other batteries, in which the cathode and anode are immersed in a shared pool of liquid electrolyte, the electrolyte in a salt battery is a solid, namely a ceramic ion conductor based on sodium aluminum oxide.

The facilities cover the entire production of sodium metal chloride cells and complete batteries: Shaping and sintering of the solid electrolyte, production and of the cathode materials, cell assembly and testing, battery assembly and testing, system design and application integration including the battery management system.
