

Haffner Energy and IðunnH2 sign an agreement to integrate biocarbon gasification technology into the production of sustainable aviation fuel (e-SAF) in Iceland. This ...

With this method, we use naturally sourced hot water to break down biomass into various single and oligosaccharides that can be used as intermediates for protein, ethanol or other chemical processes, thus providing a clean, sustainable, and ...

Haffner Energy, a leading biomass-to-clean fuels solutions provider, and IðunnH2, a green hydrogen developer, have signed an agreement aimed at integrating Haffner Energy's unique ...

Approximate estimates suggest that the total forest biomass production could reach about 10 million m³yr?¹, comprising 3.1 million m³yr?¹ of roundwood, 3.1 million m³yr?¹ for ...

SERVODAY's Boiler Fuel Storage & Feeding System is designed for efficient energy conversion from biomass fuels in Iceland, ensuring consistent and controllable feeding for optimal boiler ...

By doing this, estimation of the total role of forest biomass in energy production and its effects in substituting fossil fuels and mitigating the climate change can be assessed. The key objectives ...

By mixing CO2 with hydrogen, on a large capacity, Carbon Iceland is able to produce renewable fuels for engines that currently use fossil fuels. This will allow transportation industries to take giant steps, phasing out fossil fuels and ...

In this study, we hypothesized that the cessation of grazing would lead to less green biomass, i.e., less active biomass, and subsequent decreased carbon uptake compared to permanently ...

Majority of our captured carbon dioxide will be used to produce green fuels but large quantities will also both enter pathways for green liquid carbon dioxide and also be conveyed to carbon ...

3 · Keywords: Pinus contorta, biomass accumulation, Carbon sequestration, Afforestation, land restoration, Iceland Suggested Citation: Suggested Citation Riege, Dennis A. and ...

Iceland biomass storage
