Historically, in the U.S. power grid, inertia from conventional fossil, nuclear, and hydropower generators was abundant--and thus taken for granted in the planning and operations of the system. But as the grid evolves with increasing penetrations of inverter-based resources--e.g., wind, solar photovoltaics (PV), and battery storage--that do ...

Well, if there's a power loss associated with having the inertial separator's air exhaust vent open (I suspect this changes the fuel/air ratio), then it makes perfect sense that the pilot should be able to bypass it's use during takeoff and landing. The first question I ever posted in this forum, over a year ago, was about turboprop engines.

A self-powered micro-electromechanical systems (MEMS) inertial switch has been proposed for potential wake-up application without additional power consumption. In comparison with the previous inertial switches powered by constant voltage sources, the proposed device embedded with the charged electret could output a pulse signal without an external power supply. The ...

o Power system stores inertial energy in generators o When an outage occurs, this energy serves as a "buffer" o Decreases for $P \ll P_o$ o Generator speed is directly affected by outages ?The system frequency is directly affected by power imbalances in the grid
