

Will Iran add 500MW of solar power by next year?

By bne Tehran bureau Iran plans to add 500MW of solar power capacity by the end of the current Iranian year, as part of a broader initiative to expand its renewable energy infrastructure by more than 4,000MW by next year, Energy Minister Abbas Aliabadi announced on December 20.

How much solar power does Iran have?

Iran's existing solar capacity stands at 1,200MW, but the planned expansion could push that figure to between 3,000 and 4,000MW by next year, marking a substantial increase in the country's renewable energy portfolio.

How has Iran accelerated development in renewable power plants?

Under the current government administration since August 2021, Iran has seen accelerated development in renewable power plants. New investment packages and strategies have been introduced by the Energy Ministry to attract capital for additional renewable projects, leading to a total capacity of 1,085 MW.

How much sunlight does Iran get a year?

Iran receives more than 300 sunny days per year with solar radiation averaging 2,200 kilowatt-hours per square metre annually, making it one of the region's most promising markets for solar energy development. More than two-thirds of the country's territory receives enough sunlight to support utility-scale solar installations.

Does Iran have a solar farm?

Loading... Iran allocates 2,178 hectares of land for solar farms, aiming to launch two specialized solar parks by February 2024. The move aligns with the country's commitment to renewable energy, leading to significant savings in natural gas consumption and water usage.

How many kilowatt-hours did Iranian renewable power plants generate?

In the ninth Iranian calendar month Azar (ended December 21, 2023), Iranian renewable power plants generated 125 million kilowatt-hours, resulting in significant savings.
