

BP2 manufactures modular and compact sheet metal roofing tiles and corresponding products in the form of cut-to-size sheets. We can also boast three innovative models of roof panels, as well as a wide range of trapezoidal and corrugated sheets. Our range is complemented by gutter systems and dedicated flashings and roof accessories.

Israel's newest submarine,INS Dragon ('Drakon') may have a vertical launch system(VLS). If so,this may relate to new missile capabilities,probably for nuclear deterrence. The Israeli Navy maintains a high level of secrecy surrounding its submarine capabilities. And the latest boat,the INS Dragon,is more secretive than most.

If correct, the Israeli submarine is only the second modern AIP equipped submarine in the world designed with this capability. The first being the South Korean KSS-III class which has only recently entered service. The two classes can be seen as part of a wider trend to fit VLS on conventionally powered submarines.

Concurrently, it is believed that the submarines may feature ballistic missiles, given the submarines' unusually long sail - presumably to accommodate VLS cells, although there is no indication that Israel has, or is currently developing an SLBM.

Israel Aerospace Industries is reportedly working on a Gabriel V Advanced Naval Attack Missile, with an advanced active multi-spectral seeker designed for cluttered littoral environments. As of 2020, this variant is deployed by the Finnish and Israeli navies. Range is claimed to be more than 200 km to 400 km.

We are the creators of the SOLROOF brand and products - integrated photovoltaic roof. BP2 has five production plants in Poland (Cracow,Dabrowa Górnica),Slovakia (Kosice) and Romania (Cluj Napoca,Timisoara). WHY US? We believe in what we do and we are true to our values.

Israel's Dolphin-I and Dolphin-II class submarines are already equipped with torpedoes and cruise missiles.

But they are shot through the torpedo tubes. The inclusion of a ...
