

Where does energy come from in Italy?

Energy in Italy comes mostly from fossil fuels. Among the most used resources are petroleum (mostly used for the transport sector), natural gas (used for electric energy production and heating), coal and renewables. Italy has few energy resources, and most supplies are imported.

What is Italy's energy mix?

Fossil energy accounted for the largest share of Italy's energy mix, while renewable electricity was still marginal in the primary energy supply of the country.

What percentage of Italy's energy supply is based on fossil fuels?

Published by Statista Research Department, Jan 31, 2024 In 2022, fossil fuels accounted for over 80 percent of the total energy supply in Italy. Among fossil fuels, natural gas ranked first, covering 40 percent of the energy mix. Oil followed at around 35 percent.

What percentage of Italy's energy is renewable?

Oil followed at around 35 percent. On the contrary, renewables accounted for less than 20 percent of the total energy mix of Italy. Nowadays, energy transition is imperative, but it is easy to foresee a long way ahead before reaching a complete replacement of fossil fuels with renewable sources.

How has Italy's energy system changed since 2010?

Italy's energy system has changed notably since 2010 and today the country's energy mix includes more natural gas and renewable energies and less coal and oil.

Are Italian and US energy policies aligned?

The Italian and U.S. governments' energy policies are aligned, recognizing the importance of natural gas for energy security and, at the same time, fostering a transition to cleaner energy sources. Opportunities exist for U.S. firms in Italy in the two complementary areas of natural gas and clean energy technologies.

Italy has made strong progress in the development of energy policy, notably through the publication of the National Energy Strategy in 2013, which sets clear goals: reduce energy costs, meet environmental targets, strengthen security ...
