

Why is the global PV build forecast up 1% quarter-on-quarter?

The global PV build forecast is up 1% quarter-on-quarter, largely due to developments in India and Pakistan, with installations slower than previously expected in Japan and South Africa. Most of the established solar markets continue to build steadily. Polysilicon prices have fallen to \$4.7/kg.

How big is the solar industry in 2023?

By Jenny Chase, Solar, BloombergNEF The photovoltaic industry added about 444 gigawatts of new capacity in 2023, a 76% growth on 2022 build. Prices of solar modules are at record lows, and supply of components is plentiful. End-user markets are booming while manufacturers struggle to make a profit. Installations this year will top 520GW.

Are low prices hurting the global PV market?

Low prices for modules are stimulating demand in new markets, but hurting manufacturers, who are competing intensely to maintain market share. The global PV build forecast is up 1% quarter-on-quarter, largely due to developments in India and Pakistan, with installations slower than previously expected in Japan and South Africa.

How many polysilicon modules will be built in 2024?

We only see about 574GW(DC) of module build in 2024, mainly limited by local factors such as access to grid, land and labor. Enough polysilicon could be produced by major suppliers to make 1.1 terawatts of modules this year. Some polysilicon makers have already halted production on low prices; others are likely to follow.

3 · Discover the latest rankings and insights into the top-tier solar panel manufacturers of 2024. Explore updated rankings and key information on leading companies in the solar energy ...
