

What is the Kythnos island project?

The Kythnos Island Project was funded by the European FP 5 Microgrids program, the objective of which was to test centralized and decentralized control strategies for islanding. It is a small village scale autonomous microgrid, composed of a 3-phase low-voltage network, solar PV generation, battery storage, and a backup generator.

When was the Kythnos microgrid installed?

The Kythnos microgrid was installed in 2001 in the Gaidouromantra valley (Figure 8), forming probably the first MG in Europe supplied by 100% renewable generation most of the year. The system was built in the framework of European projects, for the electrification of 12 vacation houses in a remote settlement.

Where is Kythnos island located?

Kythnos Island is located in the Aegean Sea, close to Athens. The Kythnos Island Project was funded by the European FP 5 Microgrids program, the objective of which was to test centralized and decentralized control strategies for islanding.

What is Gaidouromantra microgrid?

C. GAIDOUROMANTRA MICROGRID Gaidouromantra is the first microgrid in Europe, installed in 2001 to electrify 14 vacation houses in Kythnos island, Greece. The microgrid is permanently islanded and it is supplied by distributed energy resources, such as photovoltaic panels, a wind turbine and a battery energy storage system.

When was the first microgrid installed in Europe?

The first microgrid application in Europe was installed in 2001 in Gaidouromantra, a settlement built in a small valley next to the coast in the southern part of Kythnos. The off-grid system electrifies 14 vacation houses with 100% renewable energy based on PVs (six PV arrays of 11 kW) and battery storage (Lead-Acid (FLA) 1000 Ah/48 V). ...

Microgrids are entities that coordinate DERs (distributed energy resources) in a consistently more decentralized way, thereby reducing the control burden on the grid and ...
