

How is energy used in Libya?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

How did energy consumption change in Libya?

Domestic energy consumption in Libya was likely driven by industry and population growth. During this period, according to the International Energy Agency, the world population grew 5.3%, and the Libyan population grew 9.4%.

Does Libya have a power supply?

Libya has rich oil and natural gas reserves that are used to produce power. At present, renewable energy sources play scarcely any role in the country. However, violent conflict is threatening the population's power supply: the existing power grid is damaged due to a lack of maintenance and acts of sabotage.

What is Libya's energy supply based on?

Furthermore, in 2020, the combined revenues from oil and natural gas exports constituted approximately 73% of Libya's total export value. In 2020, the total energy supply (TES) primarily came from oil and gas, which contributed 53% and 43%, respectively, while renewables accounted for approximately 4%.

How much power will Libya have by 2025?

The power company forecasts that Libya's peak load will increase to 14,834 MW by 2025 and to 21,669 MW by 2030. Combined-cycle power plants in Misrata (650 MW) and Tripoli (671 MW) are contributing to increased generation capacity.

Why is Libyan natural gas important for European energy security?

Libyan natural gas is crucial for European energy security, particularly for Italy, which sourced 4% of its natural gas imports from Libya in 2023 via the Greenstream pipeline. This pipeline plays a key role in connecting Libyan gas fields directly to Sicily.
