It is also important to note that over discharging can occur not only during use but also during storage. If a LiPo battery is stored for an extended period of time with a low voltage, it can become damaged and potentially unusable. To avoid over discharging during storage, it is recommended to store LiPo batteries at a voltage between 3.7V and ...

Store LiPo batteries in a fireproof LiPo charging bag or container to contain any potential fires or explosions. Keep LiPo batteries away from direct sunlight and sources of heat. Store LiPo batteries at a partial charge, typically around 50% of their capacity. This helps prevent over-discharge during long-term storage.

This is a BIS Marked Li-polymer Battery. This is a 3.7 Volt rechargeable lipo battery. Lithium Polymer batteries provide higher specific energy than other lithium battery types and are used in applications where weight and size is a concern. Features of LIPO 3.7 volt 1000 mAh. Normal Capacity : 1000 mAh; Capacity Range : 970mAh~1030mAh

LiPo batteries will lose up to 5% of their charge each month, so don't put a LiPo battery into long-term storage and expect it to have a full charge when you need to use it. When storing LiPo batteries long-term, periodically check to see if the battery still has a balanced charge. Most hobby-grade battery chargers have a "maintenance ...

Storage Temperature: Less than 3 months: -20°C to 45°C Storage Temperature: More than 3 months: 22°C to 28°C . As you can see, for shorter term storage much wider temperature variations are considered acceptable. Even during storage, there are chemical reactions happening inside your battery.

After about a year of normal use I've noticed that my lipos tend to have a noticeable performance decrease. I typically write the date (month and year) that I bought the battery on it with a marker to keep track. Also, I've noticed that if I leave a LiPo at storage for a while (month or two), it will perform poorer on the first flight.

FPV LiPO batteries on the other hand are typically rated 100C+... meaning they can discharge at much higher rate - this allow them to move fast and with much greater agility. As u/bri3d says - FPV is a different beast - the super high currents these batteries can pump out mean they need to be treated with care - there's no 100% safe version.
