

What are the energy planning strategies for Burundi?

Energy Planning Strategies for Burundi The Burundian energy supply highly depends on traditional use of biomass. The literature shows that the power supply of this country mainly relies on hydropower generation. Many hydropower projects are under development to increase the electricity access of this country .

How has private energy consumption changed in Burundi?

It is only in the last five years that private consumption has grown in real terms. Burundi`s energy consumption relies to a great extent on biomass. Households are the main consumers of energy in the country,accounting for 94% of total consumption. Their needs are almost exclusively met by traditional biomass (99%).

What type of energy is used in Burundi?

Renewable energyhere is the sum of hydropower,wind,solar,geothermal,modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal,crop waste,and other organic matter - is not included. This can be an important energy source in lower-income settings. Burundi: How much of the country's energy comes from nuclear power?

Why is Burundi lagging in energy supply?

Despite some efforts in the region to increase energy supply at national and regional levels , Burundi is lagging from meeting its total power demand: 10% of its population had access to electricity in 2012 , this access rate has only turned to 11% in 2019 according to World Bank data.

What is the most common off-grid electricity source in Burundi?

Go to Top Solar energyis the most common off-grid electricity source in Burundi,although the number of systems installed is very slow. With the global price dropping of solar technologies a small solar sector emerged in the recent years,that offer smaller systems for private households,businesses and public institutions.

What will become the Burundian power sector in long-run?

Although the country is endowed with a huge potential for various energy resources , there is higher uncertainty about what will become the Burundian power sector in long-run. This uncertainty is higher as the target of reaching 30% of electrification rate in 2030 is still far from the current situation (Fig. 2).
