Backup power systems can keep your house running during interruptions to the electricity grid due to extreme weather or natural disasters. Battery-based systems offer greater convenience, flexibility and sustainability than the traditional generator-based backups.

Comparatively, partial-home battery backup systems usually store around 10 to 15 kWh. Given that power outages are infrequent in most parts of the country, a partial-home battery backup system is generally all you'll need. But, if your utility isn't always reliable for power, whole-home battery backup may be the way to go.
