

What is the energy access problem in Mali?

Mali faces a critical energy access challenge. The national power access rate was 50% in 2019 (compared to 36.11% in 2015). The problem is particularly acute in rural areas with 21.12% access rate in 2019 (compared to 15.75% in 2015).

What is Mali's energy mix?

In 2019, Mali's energy mix was dominated by biofuels and wastes (65%) and oil products (32%), with coal and hydro accounting for the rest. In 2020, less than 5% of the population had access to clean cooking and 52% had access to electricity.

Is Mali ready to scale up renewables?

The Ministry, working through the Mali Renewable Energy Agency (AER-Mali), has initiated a partnership with the International Renewable Energy Agency (IRENA) to assess Mali's readiness to scale up renewables.

Is biomass a good energy source in Mali?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Mali: How much of the country's energy comes from nuclear power? Nuclear energy - alongside renewables - is a low-carbon energy source.

Does Mali have a good energy sector?

Mali's positive track record in developing its energy sector, evidenced by its introduction of various renewable energy technologies as well as its efforts to create a welcoming enabling environment, are also discussed in the report.

What are the main sources of electricity in Mali?

At present, thermal and large-scale hydropower plants are the main sources of electricity supply on the national grid. Renewable energy could provide the most competitive form of power in Mali due to today's advanced technological reliability, declining technology costs and high resource potential.
