

Mexico energy synergy

What is Mexico's energy source?

In 2022, Mexico's electricity generation primarily came from four key sources: natural gas (56.8%), oil (13.5%), coal (6.8%), and renewables (19.5%)--which included hydroelectric power, wind energy, solar PV systems, geothermal energy, biofuels, and waste.

What is Mexico's energy supply in 2022?

In 2022, Mexico's total energy supply (TES) consisted of oil, accounting for 44.3%, with natural gas at 39.0%, and coal at 5.5%. Biofuels and waste constituted 5.0% of the total, while other renewables, such as hydro, wind, and solar, combined to form 4.8%. Nuclear energy contributed a minor portion, representing 1.5% of the overall energy supply.

What is the energy sector like in Mexico?

The electricity sector in Mexico relies heavily on thermal sources (75% of total installed capacity), followed by hydropower generation (19%).

How will Mexico's energy trade pact affect foreign energy investors?

The trade pact provides remedies to foreign energy investors in Mexico when fair market competition is undermined; Bloomberg calculates that the reforms would jeopardize more than \$22 billion of foreign-owned solar, wind, and other renewable-energy installations.

How is energy used in Mexico?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What resources & energy infrastructure are available in the region in 2022?

The map displays the resources and energy infrastructure of the region as of 2022. Data is available for mining, electricity generation capacity, natural gas and oil infrastructure, as well as the vulnerability of these resources and energy supply infrastructure to climate impacts in the region.

U.S. Supports Mexico to reach energy goals. The Mexican Energy Pathways Initiative / Iniciativa Rutas Energéticas Mexicanas (MEPI/IREM) is a collaborative, multidisciplinary, and multisector ...
