

Does Fingrid have a common Nordic market for mfrr capacity?

In addition, a common Nordic market for mFRR capacity is planned. Fingrid procures balancing capacity from the balancing capacity market to ensure that there is enough Frequency Restoration Reserves to maintain the power balance between production and consumption and to ensure the reliability of the transmission network.

How does Fingrid use reserve markets?

To balance these deviations, Fingrid procures different kinds of reserves from reserve markets. Reserves are power plants, consumption resources and energy storages which adjust their electric power according to the need of the power system.

Does Fingrid need balancing capacity?

Until now, Fingrid has procured only up-regulation capacity from the balancing capacity market. Capacity for down-regulation has not been procured separately, but the need has been covered by voluntary domestic and Nordic down-regulation balancing energy bids.

What is the balancing capacity market of manual frequency restoration reserve (mfrr)?

The balancing capacity market of manual Frequency Restoration Reserve (mFRR) is going to change at the end of 2022 from a weekly procurement to an hourly market. Procurement volumes of up-regulation capacity will increase and the procurement of down-regulation capacity will start from the beginning of 2023.

What is Fingrid's new procurement model?

Fingrid proposes that the current market for weekly capacity will become the hourly market that is run on previous day's morning. The new procurement model is planned to have go-live by the end of 2022. 1 MW minimum bid size

What is the Nordic mfrr capacity market?

Nordic mFRR capacity market under development The Nordic transmission system operators are implementing the joint Nordic mFRR capacity market as part of the Nordic Balancing Model Project. The common market aims to improve the cost-effectiveness of procurement. Cross-border trading of mFRR capacity requires a reserve of transmission capacity.
