Depends on the battery chemistry, but yes. Any deep discharge contributes to battery degradation. Excessive discharge, below a certain voltage level can also outright kill a battery. Most batteries have protection circuits that prevent this from happening by disconnecting the battery once it hits a certain voltage level.

En général, les batteries plus grandes avec des valeurs nominales en kWh plus élevées ont tendance à peser plus car elles ont plus de cellules et de composants plus gros pour stocker plus d'énergie. Par exemple : Une batterie de 40 kWh peut peser environ 300 à 400 kg. Une batterie de 100 kWh pourrait peser plus de 600 kg ou plus.
