

Regli Energy Systems is a cleantech startup specialised in efficient and sustainable heat pumps. Because building heating accounts for over 40% of Switzerland's energy consumption and about a quarter of its emissions, a revolution in building heating is urgently needed to save the climate.

Plus, we are constantly working on new solutions: we are currently developing new, large-scale heat pumps to bring the heating transition to the cities. The market for heat ...

Regli Energy Systems is a cleantech startup specialised in efficient and sustainable heat pumps. Because building heating accounts for over 40% of Switzerland's energy consumption and ...

Efficient and green heating systems from Regli promote climate neutrality. Sustainable, with replaceable components and energy efficiency, for a green future.

Plus, we are constantly working on new solutions: we are currently developing new, large-scale heat pumps to bring the heating transition to the cities. The market for heat pumps is growing rapidly, and we want to get the best solutions to our customers in order to accelerate the green transition.

Regli Energy Systems specializes in sustainable heat pump solutions within the energy sector. The company provides high-efficiency air-to-water and brine-to-water heat pumps for residential and commercial applications, utilizing natural refrigerants like R290 propane for ...

Propane in large pumps simplifies the installation process and satisfies the demand for sustainable heating in large buildings. In line with Regli's aim to build long lasting products to aid every customers" transition to post-fossil heating.

Member - Regli Energy Systems AG. Go back. We develop and commercialize sustainable heat pumps, that are up to 2000 times less hazardous than other heat pumps. Type Startup or self ...
