

What is energy in Russia?

The Energy in Russia is an area of the national economy, science, and technology of the Russian Federation, encompassing energy resources, production, transmission, transformation, accumulation, distribution, and consumption of various types of energy. Energy consumption across Russia in 2020 was 7,863 TWh.

Is the Russian energy strategy different from the 2010 Energy Strategy?

The Russian energy strategies, although ten years apart from each other, are consistent with each other and, despite significant changes that had occurred in the past decade both in the political and energy realm, the 2020 Energy Strategy brings few changes in its approach, objectives and actions proposed, compared to the 2010 Energy Strategy.

Is Russia combining oil majors in a power struggle?

Simply sign up to the Russian politics myFT Digest -- delivered directly to your inbox. Russia's energy minister has attempted to combine the country's oil majors in a sign of the power struggle at play over the Kremlin's key wartime revenue source, according to four senior Russian energy industry figures.

Does Russia's energy strategy help transform the gas industry?

Thus, Russia's most recent 2020 Energy Strategy has been credited with the main shortcoming of not contributing enough to the transformation of the gas industry, allowing little improvements towards an open, competing market and retaining Gazprom's monopoly on pipeline gas exports (Mitrova and Yermakov 2019).

Will Russia end its dependence on Russian energy by 2030?

Russia is the EU's leading supplier of oil, gas and coal imports. But the EU has a plan to end its dependence on Russian energy by 2030. Accelerating the switch to renewable energy will be key to this strategy. The war in Ukraine has plunged Europe into an ethical dilemma over energy.

How important is the energy sector in Russia?

The energy sector represents 56% of the total export revenues and contributed to 25% of the country's GDP (Mitrova and Yermakov 2019).
