With the recent successful completion of the nation's first comprehensive grid tied renewable energy microgrid project at the University of Moratuwa (UOM), DIMO, a leading diversified conglomerate in Sri Lanka, is now well equipped to implement microgrid systems for the local industries to ensure an uninterrupted power supply.

Hence, this paper suggests the implementation of islanded microgrids in the remote regions of Sri Lanka while integrating them with the abundant renewable resources in the areas.

Network of grid-connected microgrids for more security. In order to implement the microgrid concept across a broader area, additional grid-connected microgrids are planned. Connecting these microgrids via the public grid to one another will create a supply system that maximizes local energy use while also preventing area-wide power failures.
