CS Japan's network includes, inter alios, procurement managers of the Japanese electric utilities and key private sector players. For more information, please contact the U.S. Commercial Service at Office.Tokyo@trade.gov. Japan's new Strategic Energy Plan will endorse new nuclear reactor builds and identify LNG as most viable energy source.

Is Japan a cost-competitive power source?

It has now become cost-competitivewith other sources of power generation. Japan's percentage of electricity generated by renewables in total power generation increased from 10% in FY2011 to 18% in FY2019 thanks to the Feed-in Tariff (FIT) scheme that was introduced in July 2012.

Does Japan have a low energy self-sufficiency ratio?

Energy is essential for our daily living and social activities. However, Japan is a country with a low energy self-sufficiency ratio, with a percentage of 12.1% in FY2019, a considerably low level compared with other OECD countries. It was 20.2% in FY2010 before the Great East Japan Earthquake.

Why does Japan need a multi-layered energy supply structure?

Japan is a country with limited natural resources. There is no one source of energy that is superior in every way. Therefore, it is essential to create a multi-layered energy supply structure in which each energy source is exploited fully for its best performance and compensates for disadvantages of other resources.
