In the Netherlands, the government has decided that the country must be fossil-free by 2050. This means that the current dominant source of energy for domestic heating, natural gas, must be eliminated. This covers all buildings, including more than six million homes.

This scenario study yields important insights into the range of possibilities for a sustainable energy system for the Netherlands in 2050. With the energy system optimisation model OPERA the technology, sector and cost implications of two scenarios were determined for future energy systems of the Netherlands that would achieve the Dutch ...

NIBE Energy Systems Limited was founded in 2006 and is a subsidiary of the global NIBE Climate Solutions Group which can trace its history back to the southern Swedish region of Småland in the late 1940's. Being born in the harsh outdoor environments of the Nordics means we are used to strong contrasts when it comes to climate.

This stale air has the heat extracted from it using the NIBE ERS (Energy Recovery System). The extracted heat energy is then mixed with cool, fresh air from outside resulting in warm, fresh air inside the property while the cold, stale air is deposited outside.

NIBE Energy Systems is the market leader for the heat pumps segment in the Nordic region, Germany, Switzerland, Austria, the Netherlands, Poland and the Czech Republic. Customers are the RMI sector (Renovation, Maintenance, ...
