

Togo solar generation kft

Who developed the solar power station in Togo?

The power station was developed by Amea Power, an independent power producer (IPP), based in the United Arab Emirates. The solar farm, which is the largest grid-ready in Togo, is also referred to as Mohamed Bin Zayed Power Station, named after His Highness Sheikh Mohamed bin Zayed Al Nahyan, the Crown Prince of Abu Dhabi.

What is the largest solar farm in Togo?

The solar farm, which is the largest grid-ready in Togo, is also referred to as Mohamed Bin Zayed Power Station, named after His Highness Sheikh Mohamed bin Zayed Al Nahyan, the Crown Prince of Abu Dhabi. The power station began commercial operations in June 2021.

Who owns AMEA Togo solar?

The solar park will be operated and maintained by Amea Togo Solar, the local subsidiary of Amea Power, the UAE-based IPP that owns the power station. It is expected that the power station will provide electricity to 600,000 homes and 700 small and medium-sized enterprises, in Togo.

Where is the power station located in Togo?

The power station is located in the settlement of Blitta, in the Centrale Region of Togo, approximately 83.5 kilometres (51.9 miles), by road, south of Sokodé, the regional capital. This is approximately 267 kilometres (166 miles) by road north of Lomé, the national capital and largest city in the country.

When will Togo expand to 70 MW?

In March 2023, the work on the third phase of expansion from 50 MW to 70 MW officially began, when it was flagged off by the president of Togo, Faure Essozimna Gnassingbé. The expansion to 70 megawatts and the addition of 4 MWh storage capacity is expected to conclude no later than December 2023.

Most rooftop solar installers will conduct a site visit after you sign a contract to cut their overhead costs and your installation costs. Three main solar financing options are paying upfront with cash, a solar lease or PPA, and a solar loan. Even if you're not a homeowner, you can still go solar by subscribing to a community solar program.

Net metering is an arrangement between solar energy system owners and utilities in which the system owners are compensated for any solar power generation that is exported to the electricity grid. The name derives from the 1990s, when the electric meter simply ran backwards when power was being exported, but it is rarely that simple today.
