

U S Virgin Islands ibm ess storage

What is IBM elastic storage system & IBM ESS 5000?

IBM Elastic Storage System and IBM Elastic Storage Server are pre-integrated and pre-tested IBM Spectrum Scale storage building blocks. IBM ESS 3500 uses a pair of x86-based servers, and IBM ESS 5000 uses a pair of POWER9 processor-based servers.

What is IBM ESS?

The IBM ESS is designed to provide an integrated (see Figure 1-9) and tested IBM Spectrum Scale storage building block that provides this storage growth. Incorporating IBM ESS storage servers flexibly adds to the overall IBM Spectrum Scale capacity, bandwidth, and performance, all within a single global namespace.

How many storage enclosures does IBM ESS have?

Each first-generation IBM ESS building block consists of two POWER8 processor-based servers and a specific number of storage enclosures (1, 2, 4, or 6), depending on the model. The POWER8 processor-based data servers were model S822L (IBM machine type 8247-22L). The storage enclosures can be one of the following configurations:

What is IBM storage scale?

This IBM® Redpaper publication provides an overview of the IBM Storage Scale and IBM Storage Scale System (Formally known as IBM Elastic Storage®; Server (IBM ESS) and IBM Elastic Storage System (also formally IBM ESS)). These scalable, high-performance data and file management solutions are built on IBM Storage Scale technology.

What hardware does IBM ESS use?

Server hardware (IBM ESS 5000 uses IBM POWER9 processor-based servers. IBM ESS 3500, IBM ESS 3200, and IBM ESS 3000 use x86 servers.) IBM ESS is a rack-mounted IBM Spectrum Scale storage solution. The initial IBM ESS storage building block in an IBM Spectrum Scale cluster includes the following components:

Can IBM ESS data servers be upgraded?

Standard IBM Power memory upgrades for IBM ESS Data Servers can be ordered and installed without disrupting the access to the IBM Spectrum Scale file system. In the installation process, the storage in one of the two IBM ESS Data Servers that are upgraded is failed over to the other IBM ESS Data Server.
